

Project Demo Planning

Date	1 July 2026
Team ID	-----
Project Name	Rising Waters
Maximum Marks	1 Mark

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Introduce the project, explain flood prediction challenges, and describe the project objectives.	1 mins	Butra Bhargava Teja
2	Solution Overview	Explaining the use of historical weather data and the classification models tested (Decision Tree, Random Forest, KNN, XGBoost).	1 mins	Bhavessh Anand
3	Live Feature Demonstration	Discussing Scenario 3: How the XGBoost model was validated, achieving 96.55% accuracy on test data.	1 mins	Bhargavi S
4	Live Feature Demonstration	Showcasing the Flask web application architecture and discussing the potential for IBM Cloud deployment.	1 mins	Mounika B
5	Future Enhancements	Demonstrating a meteorologist inputting rainfall/cloud visibility to trigger an evacuation advisory.	1 mins	Abbas

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the importance of flood prediction and the motivation behind the Rising Waters project.
2	Solution Overview	Present the workflow, technology stack, dataset, and Random Forest model used for prediction.

3	Live Feature Demonstration	Demonstrate the application by entering rainfall values and showing Flood and No Flood prediction results, along with the Flask backend and Render deployment.
4	Q&A Session	Address questions regarding project implementation, testing, deployment, and future enhancements.
